

Mirror Plate Fixing Instructions

Example:

Portrait Format

Mirror Plate Fixings positioned **HALF-WAY** down each **side**.

The screw heads should be covered with tape (as demonstrated on the right hand fixing). This is to prevent scratching to other paint surfaces or frames when stored together.

Two labels, one stuck on, the other attached by a good length of string.

The edge of the frame should be sealed with tape as shown.

The details should be:

Painting Title
Painting Medium
Artists Name
Artist's Address
Sale Price or Not For Sale
(If NFS, insurance Price as well)

Notice that the fixing hole is well clear of the edge of the frame. If not, the frame may be damaged during wall mounting.
